

Thank you for your continued support of NASSCO - the National Association of Sewer Service Companies.

As you know, the process of pipe cleaning can oftentimes be complicated and requires training in order to achieve success. Therefore, NASSCO, along with industry leaders and experts, is developing an educational video in further pursuit of its mission to set industry standards for the cleaning of underground pipelines.

We would appreciate your consideration in support of this project. Platinum, Gold and Silver Sponsorship Levels are still available but a donation of any denomination would be of great value to our efforts.

To date we have raised over \$43,000 towards our goal of \$75,000. Current sponsors include: Platinum (VacCon, Dohney, Vactor Manufacturing), Silver (CES, ProPipe, Visu-Sewer, Mar-Tech, Logiball, LMK, CIPP Corp, Dukes & Applied Felts, Insituform).

Please see the attached "Video Sponsorship Opportunity" flyer and draft "Jetter Video Outline" for more information. If you are interested in becoming a sponsor of this important educational video, please contact Heather Myers at heather@nassco.org or call 410-486-3500.

Thank you again for your support of NASSCO and consideration towards this project.

Sincerely,

Silver Sponsors and current NASSCO Board Members

Brad Dutruch
Vice President
CES Compliance EnviroSystems

Mark Metcalf
Vice President of Operations
Professional Pipe Services

John Nelson
Vice President of Sales
Visu-Sewer, Inc.

VIDEO SPONSORSHIP OPPORTUNITY

HELP NASSCO SET THE STANDARDS FOR SAFE AND EFFECTIVE PIPE CLEANING

Blockages, root intrusion and other issues can cause major problems for water, wastewater and storm water pipes. The process of cleaning the pipes can improve efficiencies including better system hydraulics, capacity reclamation, and increased flow. The concern, however, is that the process can sometimes be complicated and without proper training and understanding, the process can fail.

NASSCO, Inc., The National Association of Sewer Service Companies, together with industry leaders and experts, are developing an educational video to further NASSCO's mission to set industry standards for the rehabilitation of underground pipelines while assuring the continued acceptance and growth of trenchless technologies.

Since the first step in rehabilitation is cleaning, this professional video will be the first in a series offering information on equipment and tools, step-by-step instruction, and safety tips for successfully cleaning pipes. The video will cover basic information and benefits of pipe cleaning, followed by an overview of Jetter and Vacuum units, components and their capabilities, concluding with a demonstration of sewer cleaning from start to finish which will highlight machines, tools, equipment and technology.

The video will be approximately 45 minutes long, and will leave the viewer with a clear understanding of best practices. Distributed through NASSCO as DVDs and online, this video will not only improve standards for our industry, it can also provide your company with excellent exposure to prospective customers.
