

Technical Bulletin

Issue # 101

Date 6/11/2010

Version PACP Import/Export V2.2, V4.2, V4.4

Issue

Software Vendor requires SZC to have a remark for import and stops import if the remark field is blank.

Requirement

PACP version 2.2, 4.2 and 4.4 do not require the SZC code to have a remark. The data dictionary states the remark field is optional as do the index tables in the PACP manual.

Conclusion

Any software vendor that is restricting the import of a survey with this condition when it does not have a remark should issue a fix to their customer.
