

Technical Bulletin

Issue # 104

Date 6/21/2010

Version PACP Import/Export V2.2, V4.2, V4.4

Issue

Software Vendor requires the condition MGO to have a remark or stops the import.

Requirement

Good practice is to always use a remark when using the MGO condition code, but it is not a sufficient reason to stop the import of the entire survey. This would be considered a technical error but not a procedural error.

Conclusion

Any software vendor that is restricting the import of a pipe survey because the remark field is empty for the MGO code should issue a fix to their customer.
