

Technical Bulletin

Issue # 105

Date 7/7/2010

Version PACP Import/Export V4.2

Issue

Field Names in PACP export file not named correctly.

Requirement

The data dictionary for PACP version 4.2 changed some field names in the data dictionary. Each software vendor has to use the correct field names when they export the PACP transfer file or other software vendors will not be able to import from the file.

Conclusion

Any software vendor that is exporting a transfer database with incorrect field names should issue a fix to their customer.
