**DESCRIPTION:** PARSON ODOREATER is a specially designed Manhole Insert, with the addition of a canister containing 20 lbs. of activated carbon, that traps and stores unpleasant hydrogen sulfide and methyl mercaptan odors. Purified air is then allowed to ventilate into the atmosphere through the canister lid. A one-way valve allows water to drain, but no air to pass through it.

**ADVANTAGES:**
- Compact and corrosion resistant.
- Does not require routine maintenance and carbon can be replaced without removing the entire unit from the manhole.
- Will not interfere with installation or removal of the manhole cover.
- Twenty-pound bags of replacement carbon are available.

**PERFORMANCE:** Due to varying levels of H₂S concentration, this chart should assist in estimating the expected life span of the activated carbon. It is recommended to replace carbon every 6 months.

**INSTALLATION:** No special tools are required to install PARSON ODOREATER MANHOLE INSERTS. Just remove the manhole cover and clean the rim of the frame. Place the PARSON ODOREATER MANHOLE INSERT, without the canister, on the manhole frame rim. Remove the canister lid. Pour the 20 lb. of activated carbon into the canister. Grasp the handle and gently place the canister through the hole in the insert. Replace the canister lid. Reinstall the manhole cover onto the frame.

**MEASUREMENTS NEEDED FOR PROPER INSTALLATION OF PARSON ODOREATER MANHOLE INSERTS**
